## **Twist**

- Early race
- Open plant type
- Alternative for Clery
- Excellent taste
- Longer trading channels

## **Twist**

*A very early Junebearer with excellent fruit quality*

Twist is an early Junebearer with a ripening time that is about 2 days earlier than the Clery. Twist stands out by its earliness and excellent fruit quality. This new Junebearer combines a high yield with a high picking performance. In terms of total yield, Twist is at the same level as the Clery, but the fruit weight of Twist is significantly higher.

### **Plant characteristics**

The bright red fruits are firm and have an excellent taste. Not surprising with a consistently high Brix value and a pronounced strawberry aroma! The fruits are long-conical in shape, it could be that the first fruits are slightly grooved. From then on we are on fire; all fruits are shining and big. Twist is a robust strawberry plant with a highly developed root system and is therefore suitable for both open ground cultivation as also tunnel cultivation.

Kempweg 15, 5964 ND, Meterik | Tel. +31 (0)77 205 4205 | E-mail [sales@dekemp.nl](mailto:sales@dekemp.nl) | [www.dekemp.nl](http://www.dekemp.nl)

Also aivalable in organic quality!

### Appearance

Twist has an open plant type that is characterized by its spooned leaves. The flower trusses are long and form an average of 6 to 7 flowers. Attention should be paid to the planting depth during planting, as the rhizome is usually slightly higher than most other

strawberry varieties. In addition, the water requirement is a point of attention during cultivation. It should be clear that Twist is an excellent strawberry variety to score early in the season in a short period of time!
